## **Cooling element**

type 915.10

for diaphragm seals in high process temperatures

E 13.60.05

Ed.15.01

Design Cooling element is mounted to protect the pressure instrument

> from high process temperature. Air circulation through the capillary protector reduces the temperature of the filling liquid.

Material Stainless steel 316L

Length 116,5 mm

Mounting The cooling element is welded between the diaphragm seal

and the pressure instrument. As an option the cooling element

can be delivered as a component wih connection G1/2".
