

Diaphragm pressure gauge, flush For sanitary applications, NS 100 Model PG43SA-D, with integrated diaphragm element monitoring

WIKA data sheet PM 04.17

for further approvals see
page 4

Applications

- Hygienic pressure measurement for the pharmaceutical and biotechnology industries
- Mechanical pressure display on pipelines, fermenters, bioreactors and vessels
- Pressure display during processing and transport of high-quality and critical media
- Suitable for the production of active pharmaceutical ingredients (API)
- For gases, vapour; liquid, pasty, powdery and crystallising media

Special features

- Integrated diaphragm element monitoring with status display (patent, property right: e.g. DE102016005568)
- Two barriers for secure separation of the process from the atmosphere
- Mechanical pressure transmission without transmission fluid
- Completely autoclavable, suitable for CIP and SIP

Description

The model PG43SA-D diaphragm pressure gauge has been designed specifically for the highest safety requirements in the pharmaceutical and biotechnology industries. Through its patented diaphragm element monitoring, the risk of an undetected rupture of the diaphragm is eliminated since a red warning dot is immediately displayed on the dial. If this point on the dial remains white, then the pressure element is intact and cost-intensive maintenance on the measuring point is not required.

In the event of a diaphragm rupture, a second barrier in the instrument ensures the reliable separation of the environment and the process.

The diaphragm pressure gauge transmits the pressure, purely mechanically and without transmission fluid, from the process to the pressure element. Due to their thickness, the diaphragm elements are very robust and have high overpressure safety, ensuring a safe pressure measurement without any risk of contamination.

Model PG43SA-D, with integrated diaphragm element monitoring, NS 100

The flush welded diaphragm element in conjunction with the aseptic process connections enables a dead-space free connection to the process. The independent pressure display, needing no external power, finds applications with the processing and transport of high-quality and critical media, for example on portable tanks.

The PG43SA-D in hygienic design can be used for CIP (cleaning in place) and SIP (sterilisation in place) and in wash-down areas, or it can be completely sterilised in an autoclave. The measuring instrument can thus be cleaned reliably and time-efficiently. The model PG43SA-D conforms to the 3-A Sanitary Standard and is certified in accordance with EHEDG.

A variety of 3.1 and 2.2 certificates are available for GMP-compliant documentation, such as a material certificate or the list of single measured values.

Specifications

Design

Following EN 837-3 and ASME B40.100

Nominal size in mm

100

Accuracy class

1.6 per EN 837-3

Option: Grade A per ASME B40.100

Scale range	Overload safety ¹⁾	
bar	0 ... 2.5	4
	0 ... 4	8
	0 ... 6	18
	0 ... 10	40
	0 ... 16	40
	-1 ... +1.5	4
	-1 ... +3	8
	-1 ... +5	18
	-1 ... +9	40
	-1 ... +15	40
	psi	0 ... 36
0 ... 60		120
0 ... 100		300
0 ... 160		580
0 ... 200		580
-30 inHg ... +30		58
-30 inHg ... +60		120
-30 inHg ... +100		300
-30 inHg ... +150		580

1) Consider max. pressure rating (PN) of the process connection, see page 4 onwards

The given scale ranges are also available in other units, e.g. in kPa, MPa, kg/cm².

Other scales or customer-specific dials, e.g. with red mark, circular arcs or circular sectors, on request

Vacuum resistance

All scale ranges are suitable for the vacuum typical of CIP or SIP cleaning. Positive scale ranges < 6 bar (< 100 psi) are available in a vacuum-resistant version (to -1 bar).

Pressure limitation

Steady: Full scale value

Fluctuating: 2/3 x full scale value

Permissible temperature	
Ambient	-20 ... +60 °C
Medium	-30 ... +150 °C
CIP, SIP	150 °C continuously for wetted parts
Autoclaving	≤ 134 °C, ≤ 20 minutes
Storage, transport	-30 ... +70 °C

Temperature effect

When the temperature of the measuring system deviates from the reference temperature (+20 °C): max. ±0.5 %/10 K of full scale value

Ingress protection per IEC/EN 60529

IP54

Process connection

Stainless steel 1.4435 (316L), UNS S31603, lower mount

- Clamp connection per DIN 32676 / BS4825 part 3
- Aseptic connection per DIN 11864-1 /-2 /-3
- Milk thread fitting per DIN 11851
- VARINLINE®
- NEUMO BioControl®
- SMS threaded connection
- others on request

For exact designs and nominal widths see tables from page 4

Pressure element

Diaphragm element, welded to the process connection, NiCr alloy 2.4668 (Inconel® 718), UNS N07718

Surface roughness of wetted parts

- $R_a \leq 0.38 \mu\text{m}$ (15 μin), weld seam: $R_a \leq 0.76 \mu\text{m}$ (30 μin)
- Electropolished, $R_a \leq 0.38 \mu\text{m}$ (15 μin), per ASME BPE SF4, weld seam: $R_a \leq 0.76 \mu\text{m}$ (30 μin)

Level of cleanliness of wetted parts

ASTM G93 level C / ISO 15001 (residual content of non-volatile hydrocarbons $\leq 66 \text{ mg/m}^2$)

Movement

Stainless steel

Dial

Aluminium, white, black lettering

Pointer

Aluminium, black

Case

Stainless steel 1.4301 (304), electropolished

Surface roughness: $R_a \leq 0.76 \mu\text{m}$ (30 μin), (except for weld seam)

Window

Polysulphone

Ring

Crimp ring, stainless steel 1.4301 (304)

VARINLINE® is a registered trademark of the company GEA Tuchenhausen. BioControl® is a registered trademark of the company NEUMO.

Diaphragm element monitoring

Continuous monitoring of the pressure element

Function

The continuous diaphragm element monitoring indicates the current state of the pressure element.

A defective diaphragm element will be immediately indicated to the user as a red warning dot on the dial (see picture).

With the aid of the status display, the integrity of the pressure element can be checked both prior to installation and during operation.

Second barrier

The diaphragm element serves as the first barrier between the process and the atmosphere. A second barrier, located behind it, guarantees the reliable separation of ambience and process, even in the event of a rupture in the diaphragm element. The risk of any contamination between the environment and the process is eliminated by the second barrier.

In the event of a damaged diaphragm element

- Colour of the status display changes to red
- Measuring instrument is defective and can no longer be used as a reference for the process pressure
- Dismounting and exchange of the measuring instrument must be carried out in the depressurised state
- Despite a damaged diaphragm element, due to the second barrier no exchange has occurred between process and ambience

Option: Sterilisation of the reference chamber

The sterilisation of the reference chamber (space between the diaphragm element and the second barrier) is carried out using dry heat per ISO 20857/2010. The instrument is delivered including a 2.2 test report.

Zero point adjustment

External zero point adjustment, setting range $\pm 15^\circ$

The zero point adjustment can be made with a slotted screwdriver after the removal of the sealing plug on the top of the case.

Deviations in the display due to natural fluctuations in the atmospheric pressure and altitude variations can be compensated with the zero point adjustment.

Approvals
